

COVID-19 Flowchart

- A. Feel unwell falling into the category
for consultation and screening P.1
- B. Have become a close contact P.2
- C. Housemate will be tested for COVID-19 (PCR test) P.3
- D. Became evident that you had contact
with a COVID-19 patient P.4

※“Corresponding departments” are
Homeroom teacher, academic advisor, and Student Affairs
in the respective Academic Service Office of the 《student》
Head of department, General Affairs in the respective
department of the 《faculty member or employee 》

※Stay at home is indicated in yellow.

A **Feel unwell falling** into the category for consultation and screening

Stay at home without going to the university or work
☆ Report to the corresponding department

Consult with the public health center

PCR test was deemed necessary

☆ Report to the corresponding department

Be tested for COVID-19 (PCR test)

Find out the PCR test result

☆ Report to the corresponding department regardless of the test result

Positive PCR test

☆ Report the instructions of the public health center to the corresponding department

Negative PCR test (Other than close contacts)

Return to a normal life while giving due consideration to your physical condition

Identified as not requiring a PCR test

Recover according to orders from the public health center and doctors and return to a normal life while giving due consideration to your physical condition

☆ **Indicators for COVID-19 Consultation and Screening (Excerpt)**

- Any of the following serious conditions: breathing difficulty, fatigue, high fever, etc.
- Persons more likely to become severe and expectant mothers who have a symptom of milder forms of cold symptoms including fever and cough
- Persons who do not apply above and have a bout of milder forms of cold symptoms including fever and cough (If cold symptoms, etc. continue for 4 days or more, if you presume that you are in serious condition, if you have to continue to take antipyretics, etc.)

B Have become a close contact

Stay at home without going to the university or work

☆ Report to the corresponding department

PCR test was deemed necessary

☆ Report to the corresponding department

Be tested for COVID-19 (PCR test)

Find out the PCR test result

☆ Report to the corresponding department regardless of the test result

Positive PCR test

☆ Report the instructions of the public health center to the corresponding department

**Negative PCR test
(Close contact)**

Stay at home for 2 weeks (including Saturdays, Sundays, and holidays) from the day following the date of last contact with a COVID-19 patient

(Definition of close contact)

- Person who lives with a patient (confirmed case) under one roof or had prolonged contact (including in a car, flight, etc.)
- Person who examined, cared for, or looked after a patient (confirmed case) without adequate protection against infection
- Person who is likely to touched pollutants including airway secretion, biological fluid, etc. of a patient (confirmed case)
- Other: Person who had contact for more than 15 minutes with a "patient (confirmed case)" without taking infection control precaution at a distance that can be touched by hand (1 meter more or less) (The infectivity of the patient is judged from individual situations including the imminent environment and level of exposure in a comprehensive manner.)

※ The public health center narrows down close contacts from the level of exposure, wearing of masks, distancing between seats, etc. and other conditions from 2 days before the day when suspicious symptoms of COVID-19 were present (if without any symptoms, date of sampling involved in the positive confirmation) according to the above definition.

(National Institute of Infectious Diseases
"Guidelines for Active Epidemiological Investigation of COVID19 Patients
(Preliminary version as of May 29, 2020)")

C Housemate will be tested for COVID-19 (PCR test)

Stay at home without going to the university or work

☆Report to the corresponding department

Positive PCR test result of housemate

☆Report to the corresponding department

Fall into the category of close contact

☆Report to the corresponding department

PCR test was deemed necessary

☆Report to the corresponding department

Be tested for COVID-19 (PCR test)

Find out the PCR test result

☆Report to the corresponding department regardless of the test result

Positive PCR test

☆Report the instructions of the public health center to the corresponding department

Negative PCR test (Close contact)

Stay at home for 2 weeks (including Saturdays, Sundays, and holidays) from the day following the date of last contact with a COVID-19 patient

Negative PCR test result of housemate

☆Report to the corresponding department

Return to a normal life while giving due consideration to your physical con

D Became evident that you had contact with a COVID-19 patient

(For example, you received a notice from a COVID-19 app,
had contact with a COVID-19 patient at work, etc.)

Stay at home without going to the university or work

☆ Report to the corresponding department

Consult with the public health center

If identified as a potential close contact

☆ Report to the corresponding department

PCR test was deemed necessary

☆ Report to the corresponding department

Be tested for COVID-19 (PCR test)

Find out the PCR test result

☆ Report to the corresponding department regardless of the test result

Positive PCR test

☆ Report the instructions of the public health center to the corresponding department

**Negative PCR test
(Close contact)**

Stay at home for 2 weeks
(including Saturdays, Sundays,
and holidays) from the day
following the date of last contact
with a COVID-19 patient

**Do not fall into the category
of close contact**

Return to a normal life while giving due consideration to your physical condition
