

Educational purpose

To develop global human resources with the extensive knowledge needed to realize a sustainable society, and having specialties from the basics to applications of science and technology, flexibility in thinking, competencies for intellectual creativity with problem finding and solving skills, broad perspectives, enriched sense of humanity, and collaboration skills to work in teams, all with a view to contributing to the international society.

College of Chemistry

College of Engineering Sciences

College of Engineering Systems

College of Policy and Planning Sciences

Bachelor's Program in Interdisciplinary Engineering

College of Chemistry

■ Bachelor of Science

■ Educational purpose ■

We foster personnel with basic and extensive chemistry knowledge necessary for: (i) the pursuit of universal principles in the natural world as well as unknown substances and unknown phenomena; (ii) the creation of functional substances and materials development; (iii) the solution of environmental problems and energy problems; and (iv) the elucidation of life phenomena at the molecular level. Based on this, we aim to develop students with flexible ways of thinking backed by the aforementioned knowledge and understanding who are able to play vigorously active roles internationally.

■ Desired students ■

Personnel with sufficient academic abilities related to chemistry and basic academic skills in the associated fields who are motivated to pursue universal principles in the natural world and seeking new substances and unknown phenomena are desired.

Measures to ensure and improve the quality of education

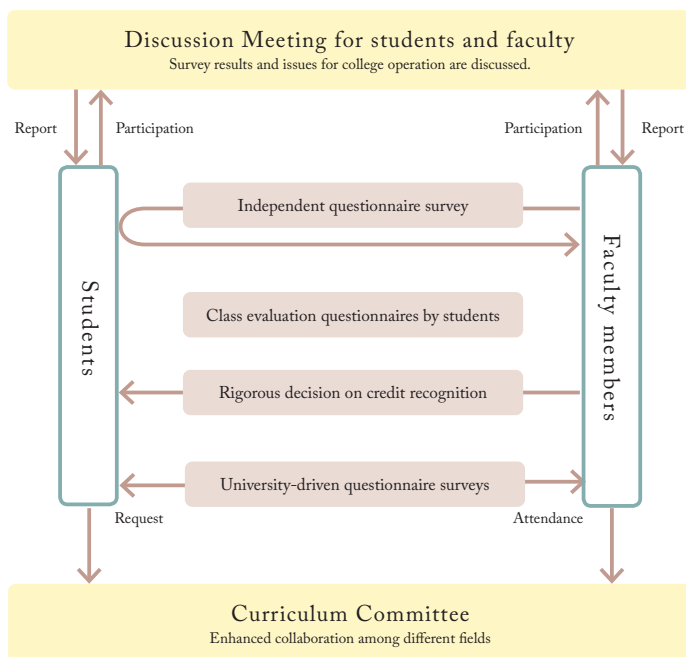

Every year, class questionnaire evaluations are conducted independently by students and by university. The results of these surveys, along with other issues for college operation, are discussed at the discussion meetings, where students and faculty members gather together. The minutes of these meetings are published in the form of an annual report.

The instructor of each course carries out his/her own survey and use the results to improve educational effects.

Results of the questionnaires above and other data are used to review the class contents and link between courses for each field of chemistry (inorganic chemistry, organic chemistry, and physical chemistry) as needed. In addition, the Curriculum Committee works to strengthen the link among different fields.

The results of final exams and reports are comprehensively evaluated for rigorous decision on credit recognition.

Discussion meetings for students and faculty, and the Curriculum Committee

Bachelor of Science

Diploma Policy

We grant diplomas for Bachelor of Science to persons who have acquired the knowledge and abilities (that is, Generic Competences) to become learned based on the educational purpose for undergraduate students of the University of Tsukuba. In their learning outcomes, they will achieve the following goals based on the educational purpose of our school and college.

Students have acquired basic knowledge in natural science and scientific thinking methods.

Students have understood substances at the level of molecular, atomic, electronic, and chemical bonding states.

Students have basic chemistry knowledge necessary for: (i) pursuing universal principles in the natural world as well as unknown substances and unknown phenomena; (ii) creation of functional substances and materials development; (iii) solution of environmental problems and energy problems; and (iv) elucidation of life phenomena.

Based on this, students have flexible ways of thinking backed by the aforementioned knowledge and understanding, and they are able to play vigorously active roles internationally.

Students are able to solve chemistry-related problems through cooperation with other people.

Curriculum Policy

We organize and implement curricula based on the following policies for programs that allow students to acquire learning outcomes related to Bachelor of Science.

General policy

We organize and implement a curriculum that allows students to move from basic knowledge to specialized knowledge so as to foster a chemical specialty over four years. We offer class subjects with a central focus on lectures and experiments. We also provide seminar subjects that allow students to proactively engage in learning activities and a Graduation Project and Thesis for fostering compressive abilities related to chemistry.

Course sequence policy

During the first year, we offer education with a central focus on lectures so that students acquire basic knowledge related to overall natural science and basic knowledge for learning specialized chemistry.

During the second year and the third year, in order for students to acquire extensive chemistry knowledge and techniques from the basic level to the specialized level, we offer practical training sessions and seminars according to systematic lectures and the progression of lectures in specialized chemistry. Moreover, in order to acquire abilities for reaching international chemical information, we provide lectures related to chemistry English.

During the fourth year, in order for students to learn knowledge about advanced chemistry and learn methods for uncovering relevant information concerning chemistry research and international chemistry information for inquiries into the truth, students engage in the Graduation Research and Thesis.

Implementation policy

We offer well-balanced lectures for Basic Chemistry and Advanced Chemistry so that the level of chemistry increases sequentially according

to the year. In order to acquire experimental methods for understanding natural phenomena, we implement practical training sessions.

■ In order for students to obtain the research methods that allow them to elucidate the truth about nature and unknown phenomena, we have a graduation project and thesis.

■ We offer chemistry lectures in English so students obtain English proficiency, which is internationally necessary in the field of chemistry.

Policy for evaluation of learning outcomes

We set achievement goals for each class subject,

and comprehensively evaluate achievement in lectures through final tests, quizzes, reports, presentations, etc., and in practical training through reports, attitudes toward experiments, questions and answers, etc.

Characteristics

In order for deeper understanding of what is learned in lectures, students take specialized Advanced Chemistry Laboratory courses in their third year, where focus is placed not only on theory but also on acquisition of experimental methods.

Educational Plan				
	1 st year	2 nd year	3 rd year	4 th year
Major Subjects		Chemistry Laboratory	Advanced Chemistry Laboratory	Graduation Research
Foundation Subjects for Major		Basic English in Chemistry	Advanced Reading of Foreign Literature in Chemistry	
General Foundation Subjects	Common Foundation Subjects, Specific Foundation Subjects			
	Basic knowledge related to overall natural science	A wide range of knowledge and skills in chemistry from basic to expertise		Knowledge in advanced chemistry
	Basic skills for studying advanced chemistry	Abilities to understand global information in chemistry		Methods for chemical research and global information search in chemistry

Subjects in College of Chemistry				
	1 st year	2 nd year	3 rd year	4 th year
	Introduction to Chemistry	Inorganic Chemistry I	Inorganic Chemistry II	Graduation Research
	Chemistry 1	Analytical Chemistry	Chemistry of Inorganic Elements	Advanced Lecture in
	Chemistry 2	Physical Chemistry I-II	Nuclear Chemistry	Inorganic Analytical Chemistry
	Chemistry 3	Organic Chemistry I-II	Molecular Structure Analysis	Advanced Lecture in
	Basic Chemistry Seminar	Biochemistry	Physical Chemistry III-IV	Physical Chemistry
		Basic English in Chemistry	Organic Chemistry III-IV	Advanced Lecture in
		Chemistry Laboratory	Seminar in Advanced Chemistry	Organic Chemistry
		Chemistry Laboratory II	Advanced Chemistry Laboratory I-II	Advanced Lecture in
			Advanced Reading of Foreign Literature in Chemistry	Biomolecular Chemistry
Common Foundation Subjects	Common Foundation Subjects		Computational Chemistry	Bioorganic Chemistry
Multidisciplinary Subjects, English	Multidisciplinary Subjects			
Information Literacy, Japanese	Physical Education			
Physical Education, Art
